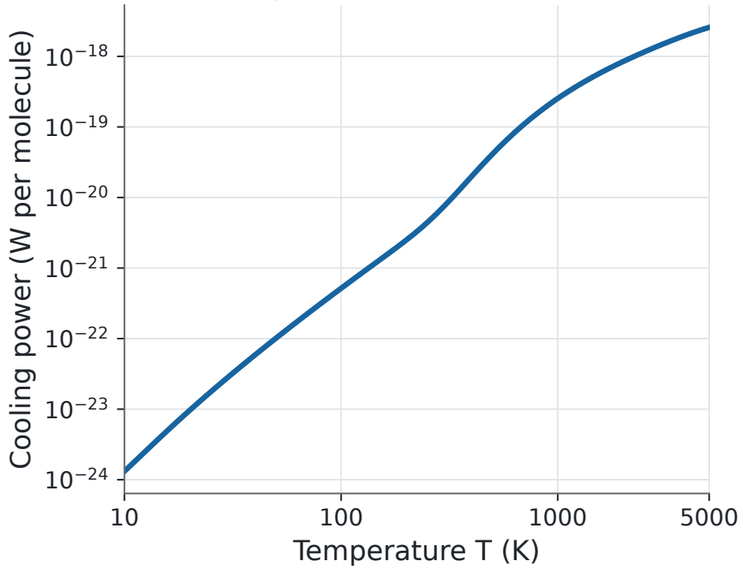
Unit 8 | Saved numerical results

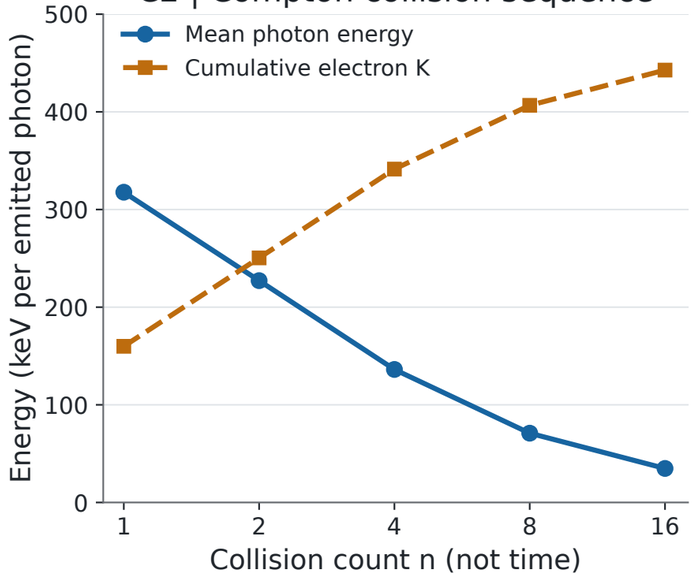
Molecular LTE emission, collision-count energy transfer, and nuclear-prior correlations

B | LiH LTE line cooling



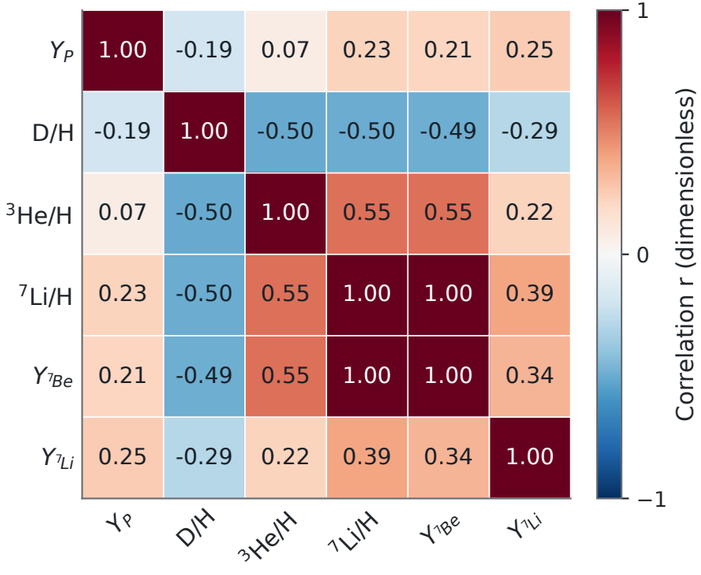
ExoMol CLT lines; LTE populations.
Per molecule; no abundance weighting.

C2 | Compton collision sequence



Cold-electron collision-count propagation.
Cumulative K is transferred energy, not heat.

D | Prior correlation (N = 64)



PRIMAT small-network prior; finite N.
No observational fit or convergence claim.
