

REC → REI → BASS: expanding Peebles / visibility benchmark

Prescribed matter-only FLRW • pure H • one temperature • source profile: HYREC2 TLA, fudge = 1

Validation result, not an EoR prediction. Initial $x = 0.8$; observer tail = 0.2; RCT OFF.
Finest x error = 1.96×10^{-11} ; relative depth error = 3.58×10^{-7} . No continuum or finite-T certificate.
