Visible component-driven final shear response
Shared symmetric difference scale; exact saved endpoint comparisons
Initial Sigma_F = 0
Initial Sigma_F = 0.01
Initial Sigma_F = 0.05
Initial Sigma_F = 0.2
Initial Sigma_F = 0.6
Initial signed P_r [10^-3]
Initial signed P_m [10^-3]
Delta S_F = final S_F of this case
minus final S_F of the actual
A_m=A_r=0 case at the same Sigma.
75 separately computed grid points.
No fit, interpolation, or linear
trajectory superposition is assumed.
Delta final signed S_F relative to actual zero-stress seed
