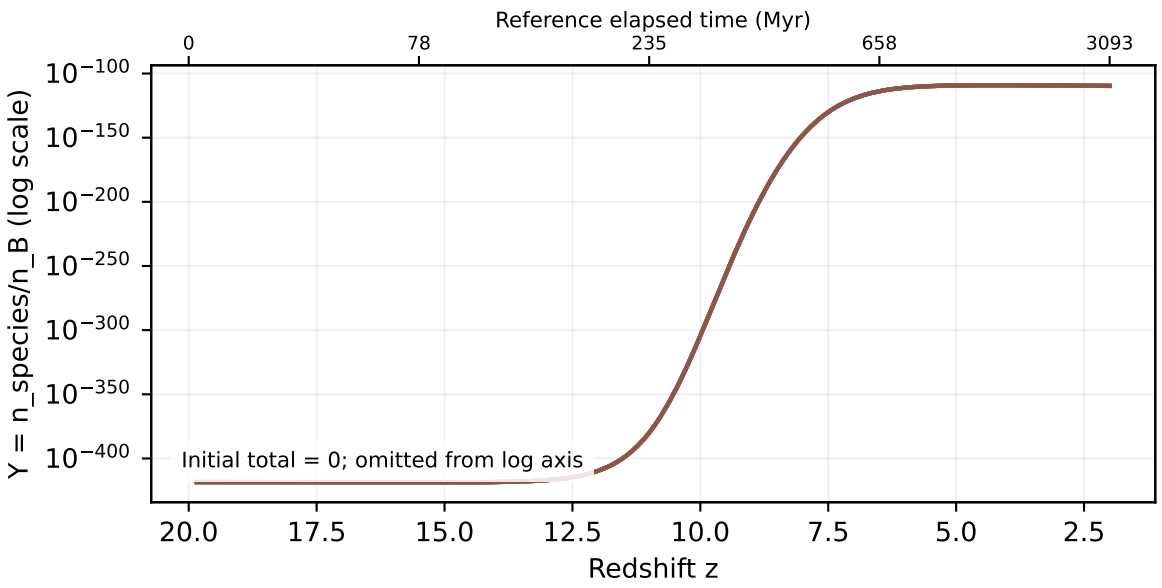
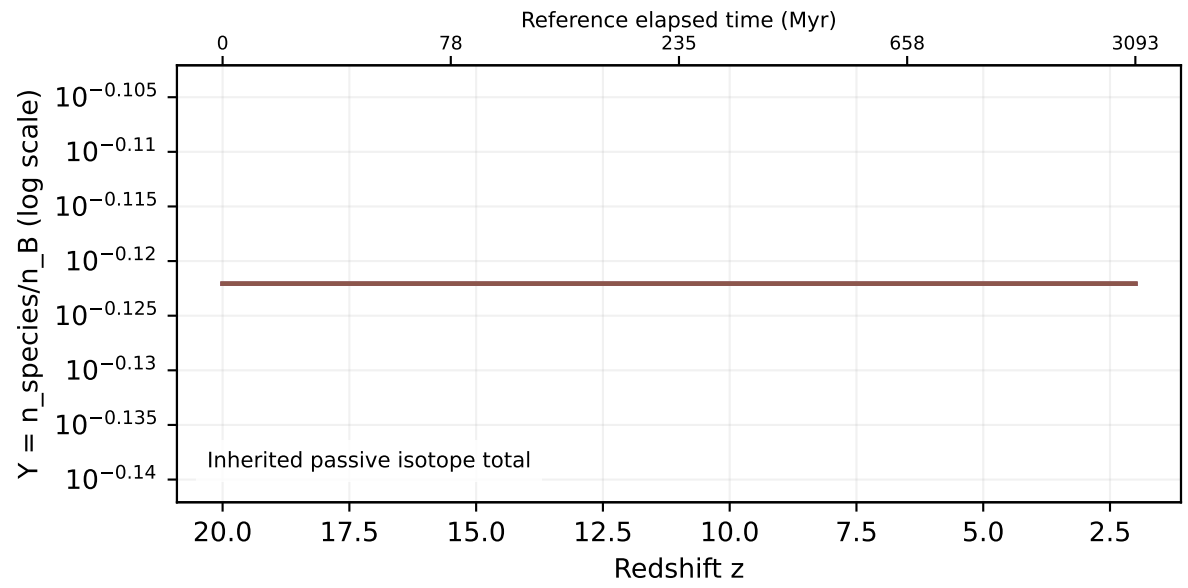
shear_orientation: isotope totals versus redshift
T/n: all-bare, instant-thermalization passive nuclear totals; no charge projection
Auxiliary axis uses reference clock: quotient_L16_S0_Am0_Ar0; other cases have different z(t).

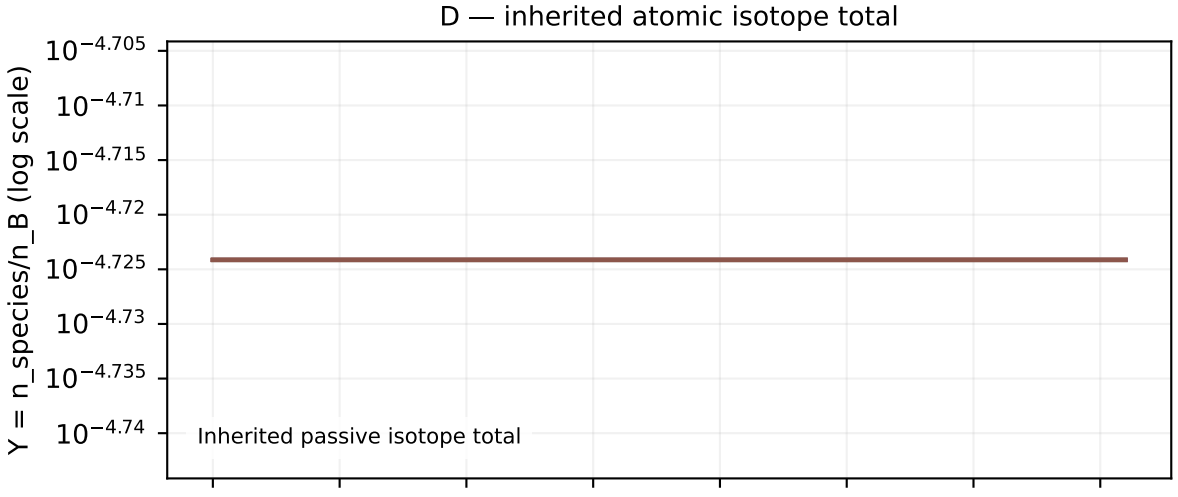
n — conditional nuclear total



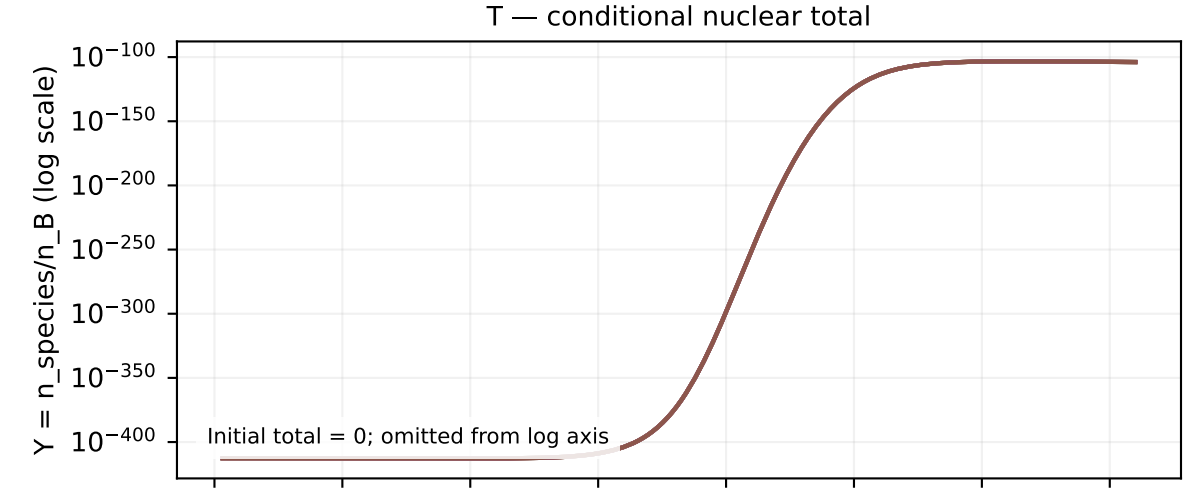
H1 — inherited atomic isotope total



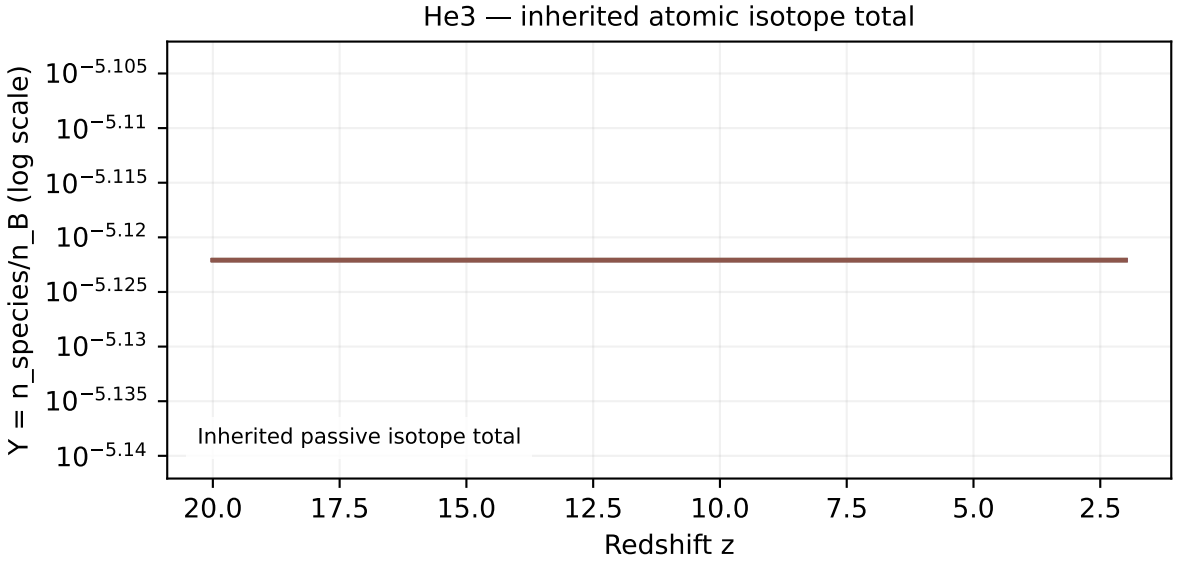
D — inherited atomic isotope total



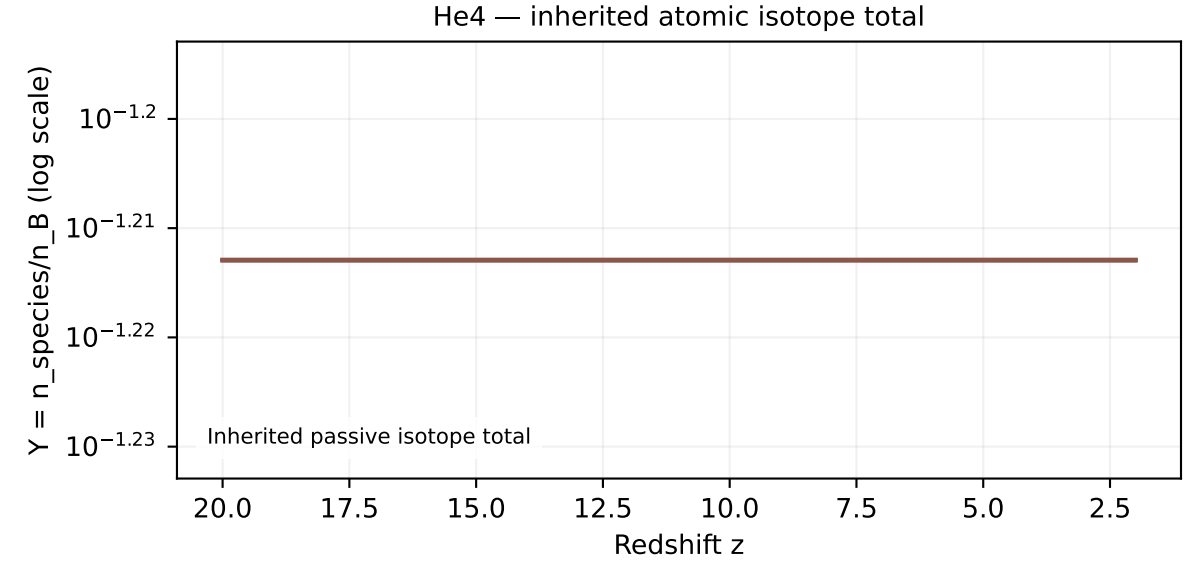
T — conditional nuclear total



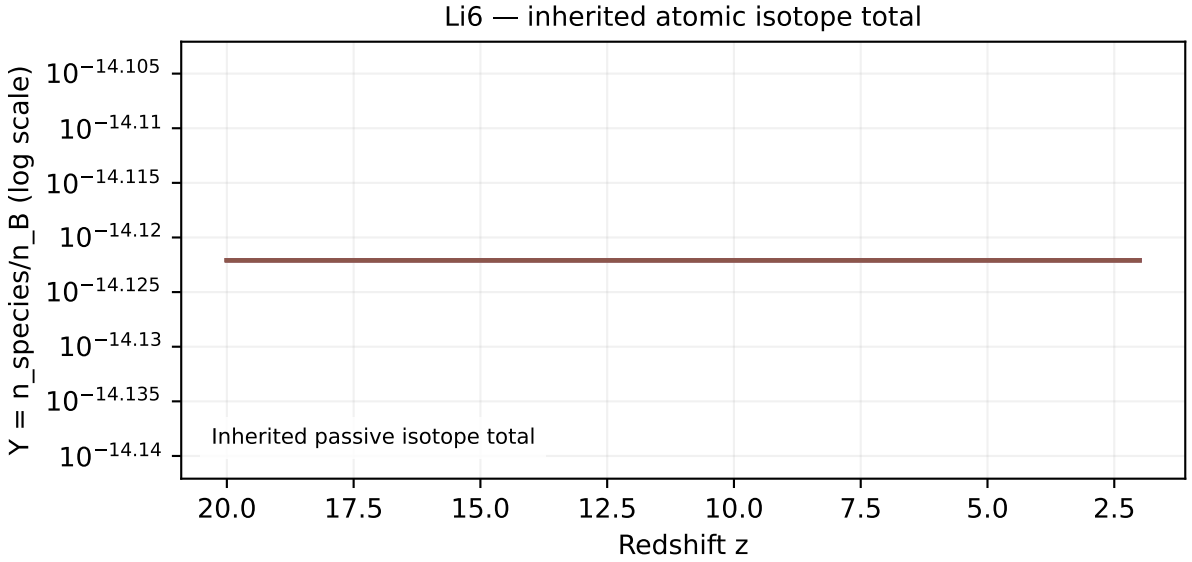
He3 — inherited atomic isotope total

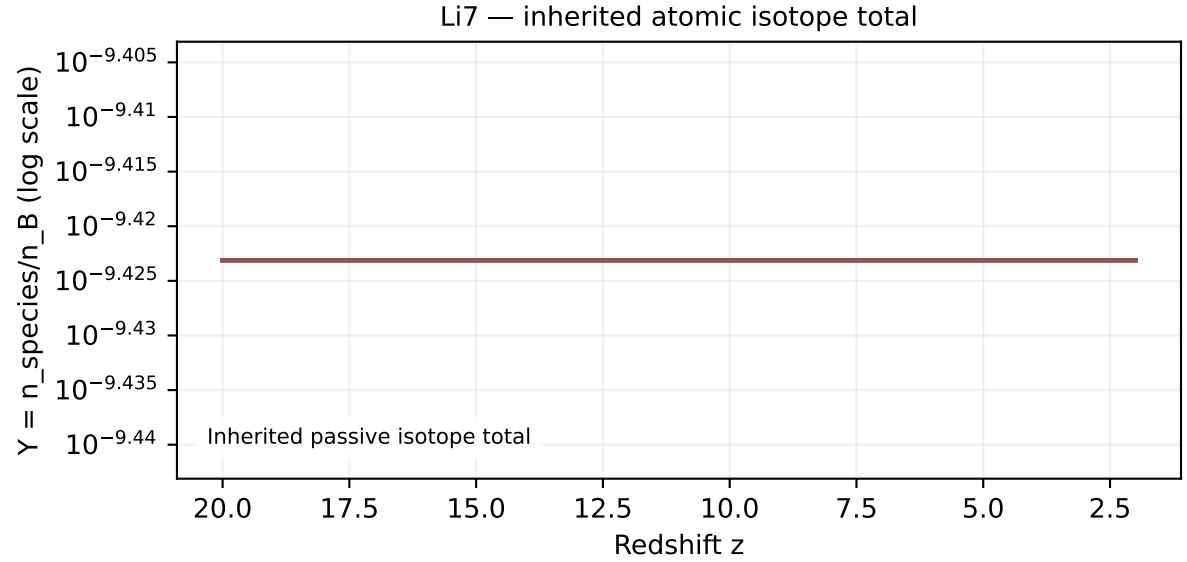


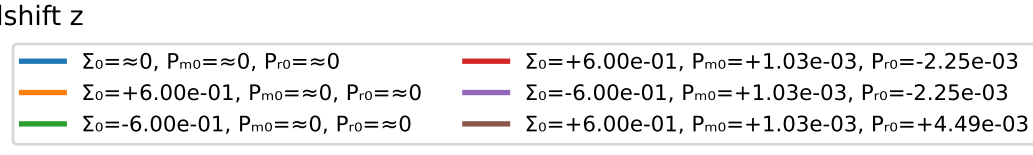
He4 — inherited atomic isotope total



Li6 — inherited atomic isotope total







Li7 — inherited atomic isotope total
